WORK EXPERIENCE

Full Stack Developer Marketing projects

IronFX | Jan 2023 – Present

Working across the full stack development of marketing projects, building highly scalable distributed solutions that enable and improve positive user experiences. Working closely with the internal marketing, IT, and product team to efficiently implement any web marketing project. Transform designs and specifications into high-quality code, including but not limited to wireframes, UML diagrams, etc. Design and develop server-side applications and APIs using Node.js. Developing and deploying data pipelines into production. Development, enhancement, and maintenance of the company's frontend & backend applications related to marketing projects. Identifying production issues as well as bottlenecks in the customer experience and provide/develop solutions. Implementation of the Internal Regulations and procedures of the Company.

Maketing Web Developer

IronFX | Mar 2022 – Dec. 2022

I develop websites from scratch using WordPress, Wix, and Unbounce. Getting any design to a live webpage quickly and accurately. In addition to the basic features, I have knowledge in custom contact form creation, 2-step form, Automatic completion by IP address, Phone verification, Phone OTP verification, API integration with CRM, SendGrip API integration, Zoom API integration, Twillio API, google spreadsheet integration, google event, Google Website Optimizer, etc. Furthermore, I understand back-end processes like NODE JS server creation and deployment, API endpoints creation, funnel automation, and Schedule task creation (i.e., sending SMS 5 min. before the webinar starts, one-click Zoom registration). Have the ability and passion for learning more and helping others realize their vision.

Webmaster/ (Amazon) AWS admin/ Internal Network Tech

RDU-Digital | May 2021 – Feb 2022

Implementing websites, mobile applications(web-based), Landing pages from concept through deployment, Standardize already existing websites with a new responsive, mobile-first approach and strategic, Assessed UX and UI design for technical feasibility, Collaborating with the product team to implement new features on existing products and new developments, Dedicated and shared servers deployment for new project. Good knowledge of working with DNS and GEO Located servers especially strong knowledge of Cloudflare. Deployed AWS Directory and Networks based on mobile and marketing teams… **more details on https://www.linkedin.com/in/petruceciltan/**
